

# MogTown Instructor Guide

MogTown's looks economy is booming, but profits are falling. Seven organizations hold different evidence. TrendTok is the shared news feed, not an eighth group.

Game website: <https://hunternbh.github.io/mogtown-da-game/>

## Prepare and allocate groups

1. Divide the class into seven roughly equal groups. Give each group its matching two-page worksheet, one phone or computer, and a calculator.
2. Open the game website. Choose the assigned organization and enter its code below. The group link preselects the organization; students still enter the code. Check all seven groups have opened Round 1.

| Group | Organization               | Group access code |
|-------|----------------------------|-------------------|
| 1     | GlowLab                    | glowlab-4816      |
| 2     | JawMax Labs                | jawmax-7264       |
| 3     | MirrorAI                   | mirrorai-3927     |
| 4     | PrimeEra AI                | primeera-6048     |
| 5     | CloutHouse                 | clouthouse-5382   |
| 6     | Consumer Protection Agency | consumer-2475     |
| 7     | Mayor's Economic Council   | mayor-9812        |

In every round: read the released evidence; discuss and write the group answer; prepare the whole-class statement; each group shares for 30 seconds; release the next round. Use the worksheet's two boxes each time.

## Run the activity - about 60 minutes

| Stage            | Time   | Instructor action and team output                                                                                                   |
|------------------|--------|-------------------------------------------------------------------------------------------------------------------------------------|
| Setup            | 5 min  | Allocate groups and materials; open the game using the matching code.                                                               |
| 1 - Descriptive  | 10 min | What happened? Describe one or two changes and show one useful calculation. Do not claim causes yet.                                |
| 2 - Diagnostic   | 12 min | Why might it happen? Give a likely explanation, supporting evidence, and one uncertainty.                                           |
| 3 - Predictive   | 12 min | What is likely next? Calculate the result of the released scenario and state the main assumption.                                   |
| 4 - Prescriptive | 12 min | What should we do? Recommend an action with evidence, the main trade-off, and one KPI.                                              |
| Final reveal     | 9 min  | Release the final evidence after all Round 4 statements. Revise the same two Round 4 boxes; each group shares what changed and why. |

**End goal: Each group recommends a practical response, supports it with evidence, explains its trade-off, and updates it after the final reveal.**

Truth Rule: Teams may frame unlocked evidence, but must not invent data or contradict a metric. Answer direct questions about unlocked metrics truthfully.

Keep round and final release codes private until their scheduled stage. Collect worksheets and assess evidence, reasoning, assumptions, trade-offs, and willingness to update.
