

MogTown Instructor Guide

Seven teams investigate why sales are rising while profits fall. Every team completes all four analytics rounds; TrendTok is the shared news feed, not an eighth team.

Prepare and allocate groups

1. Divide the class into seven roughly equal groups. Give each group its matching worksheet and private role code. Use one phone or computer and a calculator per group.
2. Assign an analyst, recorder, spokesperson, and questioner within each group. Combine jobs in smaller groups; share analysis in larger groups.
3. Students choose their assigned organization and enter its code. Check that everyone can see the briefing and Round 1 before starting.

Group	Organization	Focus
1	GlowLab	Products, growth, and profitability
2	JawMax Labs	Product performance and customer experience
3	MirrorAI	Recommendations and customer decisions
4	PrimeEra AI	Healthy aging and presentation
5	CloutHouse	Creators and marketing
6	Consumer Protection Agency	Complaints and consumer welfare
7	Mayor's Economic Council	The economy and public policy

Run the activity - about 80 minutes

Stage	Time	Instructor action and team output
Setup	5 min	Allocate groups, materials, and jobs. Distribute role codes privately; confirm successful logins.
1 - Descriptive	10 min	Ask what happened. Teams record 3 observations, 2 calculations, 1 strange pattern, and 1 unanswered question. Stop premature causal claims.
2 - Diagnostic	15 min	Release Round 2. Teams propose a hypothesis, supporting evidence, an alternative explanation, and missing causal evidence. Allow 60 seconds per team and one brief cross-question.
3 - Predictive	12 min	Release Round 3. Teams calculate the forecast and state an assumption, key driver, and what could make it wrong.
4 - Prescriptive	13 min	Release Round 4. Teams recommend an action with evidence, expected result, trade-off, and 2-3 KPIs. Allow justified custom proposals.
Prepare	5 min	Teams prepare a concise recommendation and identify their strongest evidence and main uncertainty.
Hearing & final reveal	20 min	Hear every recommendation before releasing the final code. Teams then explain whether their recommendation changes and which new evidence prompted the update.

Truth Rule: Teams may selectively disclose and frame unlocked evidence. They must not invent data or contradict an unlocked metric. Answer direct questions about unlocked metrics truthfully.

Release shared codes in order; students enter them on their own devices. Collect worksheets. Evaluate evidence accuracy, fact versus inference, forecast assumptions, and decisions with trade-offs, KPIs, and evidence-based updates.
