

MogTown Worksheet

Group 1 - GlowLab

Names

Date

Protect sustainable growth while assessing the costs and customer outcomes of GlowLab's acquisition strategy.

Use only evidence unlocked for your team. Wait for the instructor before each new round.

Round 1 Descriptive analytics

Describe changes in sales, marketing spending and customer activity. Calculate growth rates using your released dashboard and identify a pattern that needs investigation.

Three observations

Two calculations - show working and units

One strange pattern

One unanswered question

Round 2 Diagnostic analytics

Investigate whether acquisition channels help explain performance. Compare released evidence, consider customer differences, and identify a comparison that could strengthen a causal claim.

Your hypothesis

Supporting evidence and its source

One alternative explanation

Missing evidence needed to test causation

Your 60-second briefing - key points

One cross-question for another group

Truth Rule: You may selectively disclose and frame evidence. Do not invent data or contradict an unlocked metric. Answer direct questions about unlocked metrics truthfully.

MogTown Worksheet

Group 1 - GlowLab

Round 3 Predictive analytics

Use your released scenario to calculate sales value kept after returns under each assumption and the difference. Explain why retained sales value is not profit.

Forecast result and calculations - use the released scenario; label units

--

Key assumption

--

Main driver

--

What could make it wrong?

--

Round 4 Prescriptive analytics

Recommend how GlowLab should allocate its available resources. Explain the growth and cost trade-off, and choose KPIs for marketing efficiency and customer outcomes.

Recommended action

--

Evidence supporting your decision

--

Expected result

--

Main trade-off or risk

--

Two or three KPIs - what to measure, when to review, and what would trigger a change

--

Final reveal Update your recommendation

Does the new evidence change your resource allocation or recommendation? Identify the evidence and explain your reasoning.

Does your recommendation change? Identify the new evidence and explain why.

--

MogTown Worksheet

Group 2 - JawMax Labs

Names

Date

Assess JawMax's product and customer experience using evidence, and recommend a proportionate response.

Use only evidence unlocked for your team. Wait for the instructor before each new round.

Round 1 Descriptive analytics

Describe changes in units, sales, returns and support demand. Calculate growth rates and compare how quickly these measures changed.

Three observations

Two calculations - show working and units

One strange pattern

One unanswered question

Round 2 Diagnostic analytics

Investigate competing explanations for customer complaints and returns. Distinguish reported experiences from verified findings, check denominators, and identify evidence needed before attributing a cause.

Your hypothesis

Supporting evidence and its source

One alternative explanation

Missing evidence needed to test causation

Your 60-second briefing - key points

One cross-question for another group

Truth Rule: You may selectively disclose and frame evidence. Do not invent data or contradict an unlocked metric. Answer direct questions about unlocked metrics truthfully.

MogTown Worksheet

Group 2 - JawMax Labs

Round 3 Predictive analytics

Use your released scenario to calculate the change in creator-channel units, total units and gross sales. State the assumptions about other customers and prices.

Forecast result and calculations - use the released scenario; label units

--

Key assumption

--

Main driver

--

What could make it wrong?

--

Round 4 Prescriptive analytics

Recommend a response to JawMax's customer and product concerns. Explain its costs and limits, and choose separate KPIs for product quality and customer experience.

Recommended action

--

Evidence supporting your decision

--

Expected result

--

Main trade-off or risk

--

Two or three KPIs - what to measure, when to review, and what would trigger a change

--

Final reveal Update your recommendation

Does the new evidence change your proposed product or customer response? Explain which evidence matters and whether it supports your earlier reasoning.

Does your recommendation change? Identify the new evidence and explain why.

--

MogTown Worksheet

Group 3 - MirrorAI

Names

Date

Evaluate MirrorAI's recommendations and commercial incentives while distinguishing useful prediction from causal claims.

Use only evidence unlocked for your team. Wait for the instructor before each new round.

Round 1 Descriptive analytics

Describe changes in users, recommendation clicks, affiliate revenue and products shown. Calculate growth rates and check whether the reporting periods are comparable.

Three observations

Two calculations - show working and units

One strange pattern

One unanswered question

Round 2 Diagnostic analytics

Investigate the relationship between user characteristics and purchasing. Offer an alternative explanation and propose a test of whether MirrorAI's design changes behavior.

Your hypothesis

Supporting evidence and its source

One alternative explanation

Missing evidence needed to test causation

Your 60-second briefing - key points

One cross-question for another group

Truth Rule: You may selectively disclose and frame evidence. Do not invent data or contradict an unlocked metric. Answer direct questions about unlocked metrics truthfully.

MogTown Worksheet

Group 3 - MirrorAI

Round 3 Predictive analytics

Use your released scenario to calculate purchasing users in each group, the revised total and the change. Explain the assumptions about recommendation exposure and purchasing behavior.

Forecast result and calculations - use the released scenario; label units

--

Key assumption

--

Main driver

--

What could make it wrong?

--

Round 4 Prescriptive analytics

Recommend a product-design or disclosure action. Explain the trade-off between commercial performance and user outcomes, and choose KPIs that assess both.

Recommended action

--

Evidence supporting your decision

--

Expected result

--

Main trade-off or risk

--

Two or three KPIs - what to measure, when to review, and what would trigger a change

--

Final reveal Update your recommendation

Does the new evidence change your design recommendation or proposed test? Explain how it affects your assessment of user outcomes.

Does your recommendation change? Identify the new evidence and explain why.

--

MogTown Worksheet

Group 4 - PrimeEra AI

Names

Date

Represent PrimeEra's healthy-aging and presentation approach while evaluating comparisons fairly and acknowledging its commercial incentives.

Use only evidence unlocked for your team. Wait for the instructor before each new round.

Round 1 Descriptive analytics

Describe PrimeEra's users, purchases and customer outcomes. Calculate comparisons with the public dashboard and state what those comparisons alone cannot establish.

Three observations

Two calculations - show working and units

One strange pattern

One unanswered question

Round 2 Diagnostic analytics

Investigate explanations for differences between PrimeEra and other organizations. Identify possible confounders and design a fairer comparison using comparable customers, products or channels.

Your hypothesis

Supporting evidence and its source

One alternative explanation

Missing evidence needed to test causation

Your 60-second briefing - key points

One cross-question for another group

Truth Rule: You may selectively disclose and frame evidence. Do not invent data or contradict an unlocked metric. Answer direct questions about unlocked metrics truthfully.

MogTown Worksheet

Group 4 - PrimeEra AI

Round 3 Predictive analytics

Use your released scenario to calculate forecast users, purchasing users, gross order value and kept sales under each return assumption. Compare the results and explain their limits.

Forecast result and calculations - use the released scenario; label units

--

Key assumption

--

Main driver

--

What could make it wrong?

--

Round 4 Prescriptive analytics

Recommend an evidence-based policy or company action. Explain PrimeEra's commercial interests, a trade-off, and KPIs that permit fair comparisons across customer groups.

Recommended action

--

Evidence supporting your decision

--

Expected result

--

Main trade-off or risk

--

Two or three KPIs - what to measure, when to review, and what would trigger a change

--

Final reveal Update your recommendation

Does the new evidence change PrimeEra's recommendation or its comparison with other organizations? Explain the adjustment and any remaining uncertainty.

Does your recommendation change? Identify the new evidence and explain why.

--

MogTown Worksheet

Group 5 - CloutHouse

Names

Date

Protect a viable creator-marketing channel while evaluating campaign performance and responsible promotional practices.

Use only evidence unlocked for your team. Wait for the instructor before each new round.

Round 1 Descriptive analytics

Describe changes in creator-coded sales, commissions and creator activity. Calculate growth rates and examine how sales are distributed across creators.

Three observations

Two calculations - show working and units

One strange pattern

One unanswered question

Round 2 Diagnostic analytics

Investigate whether campaign practices help explain differences in customer outcomes. Consider audience and product differences, and identify evidence needed for a stronger causal conclusion.

Your hypothesis

Supporting evidence and its source

One alternative explanation

Missing evidence needed to test causation

Your 60-second briefing - key points

One cross-question for another group

Truth Rule: You may selectively disclose and frame evidence. Do not invent data or contradict an unlocked metric. Answer direct questions about unlocked metrics truthfully.

MogTown Worksheet

Group 5 - CloutHouse

Round 3 Predictive analytics

Use your released scenario to calculate affected creator sales, the sales reduction and revised total sales. State the assumptions linking traffic to purchases.

Forecast result and calculations - use the released scenario; label units

--

Key assumption

--

Main driver

--

What could make it wrong?

--

Round 4 Prescriptive analytics

Recommend a creator or campaign policy. Explain the trade-off between channel revenue and customer outcomes, and choose KPIs for campaign performance and compliance.

Recommended action

--

Evidence supporting your decision

--

Expected result

--

Main trade-off or risk

--

Two or three KPIs - what to measure, when to review, and what would trigger a change

--

Final reveal Update your recommendation

Does the new evidence change your campaign policy or recommendation? Explain what it suggests about customer outcomes and the information still needed.

Does your recommendation change? Identify the new evidence and explain why.

--

MogTown Worksheet

Group 6 - MogTown Consumer Protection Agency

Names

Date

Identify preventable consumer harm using reliable evidence, balancing how often problems occur with how serious they are.

Use only evidence unlocked for your team. Wait for the instructor before each new round.

Round 1 Descriptive analytics

Describe changes in complaints, orders and reported concerns. Calculate complaint growth and complaints per order, and distinguish complaint records from social-media posts.

Three observations

Two calculations - show working and units

One strange pattern

One unanswered question

Round 2 Diagnostic analytics

Investigate which consumer problems warrant attention. Check categories and denominators, distinguish frequency from visibility, and identify evidence needed to assess severity and underlying causes.

Your hypothesis

Supporting evidence and its source

One alternative explanation

Missing evidence needed to test causation

Your 60-second briefing - key points

One cross-question for another group

Truth Rule: You may selectively disclose and frame evidence. Do not invent data or contradict an unlocked metric. Answer direct questions about unlocked metrics truthfully.

MogTown Worksheet

Group 6 - MogTown Consumer Protection Agency

Round 3 Predictive analytics

Use your released scenario to forecast complaints from order growth and the assumed complaint rate. Explain how reporting behavior or operational changes could alter the result.

Forecast result and calculations - use the released scenario; label units

Key assumption

Main driver

What could make it wrong?

Round 4 Prescriptive analytics

Choose focused enforcement priorities within your released capacity. Explain the trade-off between reach and intensity, and specify outcome and compliance KPIs.

Recommended action

Evidence supporting your decision

Expected result

Main trade-off or risk

Two or three KPIs - what to measure, when to review, and what would trigger a change

Final reveal Update your recommendation

Does the new evidence change your enforcement priorities? Explain how it affects your assessment of frequency, severity or preventable harm.

Does your recommendation change? Identify the new evidence and explain why.

MogTown Worksheet

Group 7 - Mayor's Economic Council

Names

Date

Combine stakeholders' evidence to balance consumer welfare, employment, public revenue and the industry's financial health.

Use only evidence unlocked for your team. Wait for the instructor before each new round.

Round 1 Descriptive analytics

Describe changes in employment, tax revenue, margins and working capital. Calculate useful comparisons and identify tensions between economic growth and financial performance.

Three observations

Two calculations - show working and units

One strange pattern

One unanswered question

Round 2 Diagnostic analytics

Use the released cost bridge to reconcile revenue and profit changes. Combine other teams' evidence, distinguish accounting explanations from underlying causes, and identify missing causal evidence.

Your hypothesis

Supporting evidence and its source

One alternative explanation

Missing evidence needed to test causation

Your 60-second briefing - key points

One cross-question for another group

Truth Rule: You may selectively disclose and frame evidence. Do not invent data or contradict an unlocked metric. Answer direct questions about unlocked metrics truthfully.

MogTown Worksheet

Group 7 - Mayor's Economic Council

Round 3 Predictive analytics

Use your released scenario to forecast sales and profit under each margin assumption. Compare the outcomes and distinguish percentage-point changes from percent changes.

Forecast result and calculations - use the released scenario; label units

--

Key assumption

--

Main driver

--

What could make it wrong?

--

Round 4 Prescriptive analytics

Recommend a targeted city response using other teams' evidence. Explain the economic and consumer trade-offs, select KPIs, and state when to revise the intervention.

Recommended action

--

Evidence supporting your decision

--

Expected result

--

Main trade-off or risk

--

Two or three KPIs - what to measure, when to review, and what would trigger a change

--

Final reveal Update your recommendation

Does the new evidence change the city's recommendation? Explain which stakeholder evidence changes your priorities and how you would monitor the decision.

Does your recommendation change? Identify the new evidence and explain why.

--
